

JETS™ ROVER

The Jets™ Rover is the ultimate solution for operators looking to enhance their fleet with vacuum-flushing units or as a reliable backup for large-scale operations.

This plug-and-play module is perfect for everything from small events and camping sites to emergency and response operations. With a capacity to handle 2-3 modules, the Jets™ Rover ensures you have the flexibility and power you need.

Even though it has one less pump compared to Satellite's Sanitrax Tech module and does not include the APP feature, the Vacuumator™ pump excels in high-demand situations. The Jets™ Rover is field-ready and can be swiftly deployed to create a sanitary infrastructure in remote areas. When hooked up to toilet modules, the Nomad Catcher is required, ensuring seamless and efficient operation. This combination of features makes the Jets™ Rover an indispensable asset for any operation.
